TITLE: Generating arbitrarily phase shifted digital  
signal -  
supplying to dividing frequency of original signal and  
two variable phase shifters

----- KWIC -----

Basic Abstract Text - ABTX (1):

The HF clock pulse signal has its phase shifted by an arbitrarily adjustable  
phase value between zero and pi, using adjustable phase shifters  
between zero  
and pi/2 or 3 pi/4. The original signal (T) frequency is divided and  
phase  
shifted of the divided signal from 0-pi/2 and pi are generated. The  
process  
uses two variable phase shifters such that the first one input is  
supplied with  
a non-delayed, or with a -pi/2 phase shifted, frequency divided  
signal.
